

FACT SHEET **CMV DRIVER**

The National Registry of Certified Medical Examiners

The National Registry of Certified Medical Examiners (National Registry) is a Federal program that establishes requirements for healthcare professionals that perform physical qualification examinations for truck and bus drivers. To become a certified medical examiner (ME) and be listed on the National Registry, healthcare professionals must complete training and testing on the Federal Motor Carrier Safety Administration's (FMCSA) physical qualifications standards and guidelines.

Background Information

- The National Registry:
 - o Ensures that medical examiners understand how FMCSA medical regulations and guidance apply to CMV drivers.
 - o Was created to enhance CMV driver health and reduce highway crashes. Information from NTSB crash investigations indicates that improper medical certification of CMV drivers with serious disqualifying medical conditions has directly contributed to fatal and injury crashes.

- Important Dates

- o All commercial drivers whose current medical certificate expires on or after May 21, 2014, at expiration of that certificate must be examined by a medical professional listed on the National Registry of Certified Medical Examiners.

Impact on Interstate CMV Drivers

- Drivers are required to obtain physical examinations and a medical examiner's certificate from a certified medical examiner listed on the National Registry.
- Interstate CMV drivers can find certified medical examiners in their area, or anywhere in the country, on the National Registry website.
- Drivers will still receive a medical certificate from the medical examiner after passing their examination; however, medical certificates will now include the certified medical examiner's National Registry Number.

For more information, visit the National Registry website at <https://nationalregistry.fmcsa.dot.gov>.
